

EXPLAIN EVERYTHING: SHAPES

Learn how to create different types of Shapes in Explain everything.

Shapes

The **Shapes**  tool lets you easily drag basic **mathematical shapes** onto the **canvas**.

1 Select a **shape type** and then click and drag in an empty area of the **canvas** to create it.

2 Drag and choose your preferred **border width** etc.

3 Click and choose a color **preset**. Click the same preset again to customize it with your preferred **Border** and **Fill** colors and **Opacity**.

4 Click to add a new preset with **custom color** options.

 You can use the pen to add annotations on your shapes. Annotations will automatically anchor (group) to the shape.
