UPDATE THE ACTIVPANEL FIRMWARE

Learn how to update your ActivPanel's firmware.

Firmware update

Your ActivPanel receives regular updates to ensure security, improve functionality and even add new features. In most cases, the IT-department will handle these updates centrally. You can also, however, update to the latest version directly from the ActivPanel.

1

Open the Menu, Applications locker and then select Update.

2

If your ActivPanel has an Internet connection, an automatic search for updates is performed. If a newer firmware is available, select Online update now.

3

if your ActivPanel does not have an Internet connection, you can download the latest firmware from:
https://support.prometheanworld.com/s/downloads

Copy the downloaded file onto an empty USB stick.

4

Insert the USB-stick into one of the ActivPanel's USB ports, select Local update and follow the onscreen instructions.
