

VIRTUAL KEYBOARD HANDWRITING

Learn how to enable handwriting to text conversion on your ActivPanel.

Enable handwriting

if you prefer to use handwriting, as an alternative to the virtual keyboard, this is easily enabled on your ActivPanel.

Open the **Menu**, **Applications locker**.
Select **Settings** and then **System**.

Select **Languages & Input** - **Virtual Keyboard** - **GBoard**.

Select **Languages** and then click the **language** you want to enable handwriting for - e.g. **English (US)**.
Select **Handwriting**.

When using the **virtual keyboard**, select the **Globe** icon to switch between **handwriting** and **traditional** keyboard.
