

# SCREEN CAPTURE

Learn how to capture and save any content displayed on your ActivPanel.

## Screen Capture

The **Screen Capture** app lets you capture any content displayed on the ActivPanel - including content from external sources, web camera etc. - and save it as an image, or share it directly into the **Whiteboard** app.

Open or navigate to the content or source, you want to capture.

From the **Menu**, open the **Applications Locker** and select **Screen Capture**.

Crop the image to the desired area, using the **handlebars** in the corners and select **Done**.

Select **Save As**, to save your **image** to a desired location, or **Open in Whiteboard** to paste it into a current or new **Whiteboard** file.
