

How to Integrate the Promethean Whiteboard App with Other Apps

The Promethean Whiteboard App is amazing on its own, but just wait until you begin integrating other applications and functions!

If you and your students are working in an application you love, but you wish to pause and take the lesson in a new direction, simply click the **Pink Power Button**, then **Screen Capture**.

This captures the current screen and automatically adds it to a whiteboard canvas for you.

You may manipulate this image as you would any other. With the **Select Tool** in use, drag to move, and pinch and zoom to resize or rotate. Use **Annotation Tools** to write over the top of the image.

Simply click the **Pink Power Button** again and then **Back** to return to your application.

Consider using this process to integrate screen captures while students are casting or mirroring, or with connected devices by using the HDMI IN application.
