

How to Import Assessment Questions in ClassFlow

Save valuable time when creating an assessment by easily importing assessment questions from other ClassFlow resources. This is handy for creating end-of-unit summative assessments.

 Import

To import questions, whether you are creating a stand-alone or a lesson-based assessment, select the **Import** button in assessment builder.

The Import Question window opens. This gives you access to all resources with assessment questions in your ClassFlow account. Scroll through to locate the resource you wish to pull questions from or use the **search** field.

Select all questions or specific questions, or use the dropdown menu to isolate certain question types. Use **Randomize Questions** to randomly select and import the number of questions you wish from a selected resource. Click **Import** once you have made your selections.

Click **Assessment Summary** on the left to view all questions at once, rearrange them, and more.
