

How to Interact with Poll Results in ClassFlow

Being able to interact with poll results is one of users' favorite ClassFlow features.

Once you have started a poll, you may view and interact with results. Whether polling from a lesson or an Instant Whiteboard session, poll results will populate on a new results card. The results card will appear with in your card carousel with a pink bar graph icon.

Select a **poll response** for options. You may color code, click the three horizontal dots to begin a new poll, connect responses by linking the small circles, or delete the response. Move a poll response anywhere on the results card by dragging and dropping.

Create a teacher response to add text, add annotations, or begin a new poll by double-clicking anywhere in the gray area of the results card.

These options allow you to maximize teachable moments with your students.

Poll results populate anonymously by default. Toggle **Show Names** on the Teacher Panel to reveal students' names.

ClassFlow automatically saves all delivered polls under the **Classes** tab.
