

## How to Manipulate Objects on a Card in ClassFlow

Objects on cards, including text, shapes, and images, can be manipulated in several ways in ClassFlow Lesson Builder.

With the **Select** tool in use, simply drag an object to move it. Drag the round, **green handle** to rotate an object. Drag the **sizing handles** to resize an object.

Select the **object**, then click the **gear** for more options.

Choose an option or click **Actions** to view additional options.

To delete an object, select **Delete** from the gear's menu, or use your Delete or Backspace key while the object is selected.

When in Lesson Presenter, you can manipulate unanchored objects by using the Select tool.
