

How to Send Content to Students in ClassFlow

Being able to quickly share content with connected students is a key ClassFlow feature. You may connect students via Open Class or a rostered class. Once at least one student has joined your session, sharing content is enabled.

Click the **Send** button from your Teacher Panel to send the current card to connected students.

Once you click **Send**, you may choose between sending the card to **All Students** or differentiate and send to **Individuals**. Click the blue **Send** button to complete the action.

Note: If delivering to a rostered class in which you have created groups, you will also see the option to send to **Groups**. This will only be shown if you have two or more students connected.

Creating Student Cards in Lesson Builder is also an ideal way to send content to connected students.
