

How to Create a ClassFlow Activity

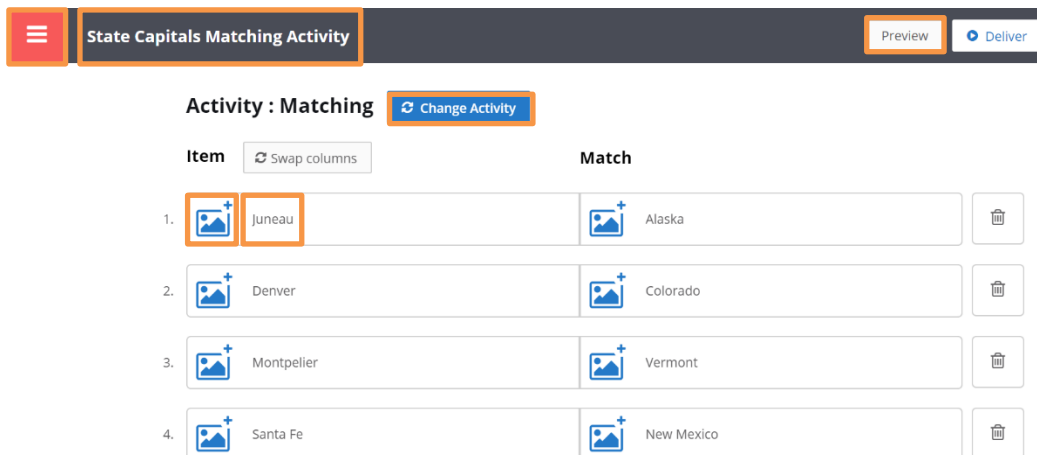

With ten different activity types to choose from, ClassFlow Activities are an ideal way to help students practice skills and concepts, no matter your grade level or content area.

To create an activity from the ClassFlow homepage, select the **Create Activity** button.

To create an activity from the **Resources** tab, select **+New**, then **Activity**.

Activity Builder opens. It's good practice to title your activity and include the activity type for easy retrieval.

Matching is the default activity. To change the activity type, select **Change Activity**.

The data you need to input depends on which activity you choose. For most activities, you may add text and images.

Customize your activity with a color scheme and Activity Background.

Use **Preview** to see how the activity will look and operate. Activities can be played on your front-of-class display, as well as sent to connected student devices.

Select the **ClassFlow Menu** to save or exit.

Reuse the same content for a different activity type by making a copy of it under the **Resources** tab. Select the copy and **Edit Activity**. Click **Change Activity**, rename it, and be sure to save.
