

How to Add a YouTube Video to a ClassFlow Lesson

ClassFlow offers multiple ways to search for and insert YouTube videos into your lessons. Videos allow you to visually demonstrate concepts, they can be used in tandem with ClassFlow polling to check for understanding, and more.

One option is to use the **Insert** button from the toolbar in Lesson Builder. This is best if you do not yet have a YouTube video in mind. Next, select **YouTube Videos** from the dropdown menu and enter your search terms. Click the small blue **i** to preview a video. You may **Insert** the video into the current card, or **Insert in New Card**.

Note: Your video will not play while in Lesson Builder. Select **Preview** to view full functionality.

Another way to include a YouTube video for which you have an existing link is by selecting the **Link** button from the toolbar. Choose how you would like the video to be displayed and title it if you wish.

To embed the HTML code of your video, use the **Link** button from the toolbar and select the **Custom HTML** tab.
