

Types of Polls in ClassFlow

ClassFlow offers eight poll types – truly something for every possible instance of questioning within your class, regardless of grade level or content area. Note: You must have at least one student connected to initiate a poll.

Creative polls are the only type that allows students to interact with the card itself. A small toolbar will display below the sent card.

Use **Word Seed** for words and short phrases. Students may submit multiple responses.

Use **Text** polls for students to enter text.

Use **Number** polls for students to respond in the form of a number.

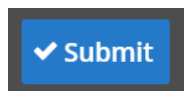

Use **Multiple Choice** to present students between two and five options (A-E).

Use **Scale** polls to assess Agreement, Confidence, or create a Generic 1-5. These are ideal for debates or checking for understanding.

Use **True/False** to present students with two options.

Use **Yes/No** to present three options: Yes, No, or Don't Know.

True/False, Yes/No, and Creative polls are well suited for younger grades.

With all polls, students must click the blue **Submit** button in the bottom right corner of their screen to send you their response.

ClassFlow automatically saves all delivered poll results under the **Classes** tab.
