

How to Use the Instant Whiteboard in ClassFlow

The ClassFlow Instant Whiteboard is perfect for warm-ups, notes, and more.

To begin, select the **Instant Whiteboard button** from the ClassFlow homepage. This launches Lesson Presenter and provides you with a blank card. The toolbar below the card offers many possibilities.

1. Select the **ClassFlow Menu** to open existing ClassFlow lessons, insert images from your ClassFlow Resources, and exit. Upon exiting, you will always be prompted with an option to save the session so you may return to it later.
2. The **Toggle Carousel** button expands to show all the cards within your session. Add additional cards by selecting the **Toggle Carousel** button, then click the **Add Card** button.
3. Use the **Previous Card** and **Next Card** buttons to navigate between cards.
4. Use the **Selector Tool** to choose objects on a card.
5. Use the **Text Tool** to quickly add a text box to a card.
6. Insert and customize **Shapes**. Click the arrow to expand the Shapes menu.
7. Add annotations with the **Pen Tool**. Click the arrow to expand the Pen Tool menu.
8. **Erase** annotations. Click the arrow to expand the Eraser menu.
9. Access the **Toolbox** to add a protractor, ruler, compass, set square, graphing calculator, revealer, and spotlight. These add interactivity to any lesson.
10. Use **Component Properties** to customize objects on a card.
11. Use the **Fill Tool** to customize your card.
12. Use **Zoom** to change the card size to best meet your students' needs.
13. Use **Undo and Redo** to make necessary changes.

Once at least one student device is connected, **Sending Content** and **Polling** buttons will be enabled on your Teacher Panel.
