

How to Use the ClassFlow App from the G Suite Marketplace

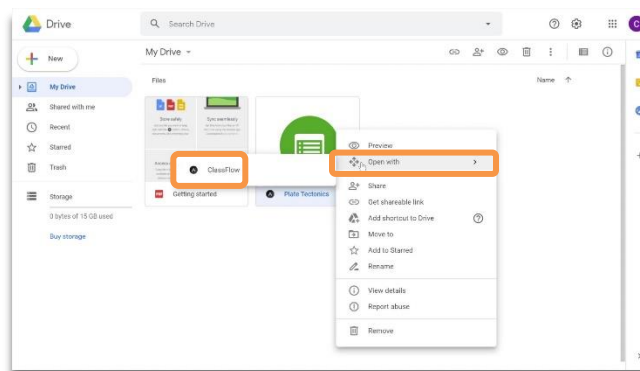

The ClassFlow App from the G Suite Marketplace enables you to create ClassFlow Lessons, Assessments, and Activities. Once the ClassFlow app has been installed, you may access the ClassFlow app from Google Drive by selecting the **My Drive** dropdown, then **More**. Slide over and select **ClassFlow** from the list.

When you arrive at the Create New screen, decide which type of resource you'd like to create. For this example, let's choose **Lesson**. Select **Create**. Since this lesson will reside in both your ClassFlow and Google Drive accounts, you may be prompted to confirm and allow permissions once more.

Begin building your lesson. You can save your work using the ClassFlow menu in the upper left corner. When you return to your Google Drive account, you'll now see that lesson appear. To open with ClassFlow, right-click, then select **Open with... ClassFlow**. Continue editing your lesson, Preview, or Deliver to Open Class.

Resources created from the ClassFlow app will appear in both your Google Drive account and your ClassFlow account under Resources. Please note: Resources created from your ClassFlow account will only reside within your ClassFlow account under Resources, and not within your Google Drive.
