

How to Add a Website to a ClassFlow Lesson

ClassFlow offers multiple ways to search for and insert websites into your lessons. Websites allow you to incorporate current events, send cards to connected students to enable research, and more.

One option is to use the **Insert** button from the toolbar in Lesson Builder. This is best if you do not yet have a website in mind. Select **Bing Web Pages** from the dropdown menu and enter your search terms. Click the small blue **i** to preview the video. You may **Insert** the video into the current card or **Insert in New Card**.

The screenshot shows the Lesson Builder interface. At the top, there is a 'Select a file' button, a settings gear icon, and two buttons: 'Insert in New Card' and 'Insert'. Below this is a search bar with a dropdown menu set to 'Bing Web Pages' and the search term 'coding for elementary'. To the right of the search bar is a magnifying glass icon. Below the search bar is the text 'powered by bing' with the Bing logo. To the right of the search bar is a button labeled 'Upload New Resource'. Below the search bar is a section titled 'Show All Types' with a list of search results. The first result is 'CS Fundamentals for grades K-5 | Code.org' with a small blue 'i' icon to its right. The second result is 'Kodable - Official Site' with a small blue 'i' icon to its right. The third result is 'Add Coding to Your Elementary Curriculum. . . Right Now ...' with a small blue 'i' icon to its right. The fourth result is 'Best Coding Tools for Elementary | Common Sense Education' with a small blue 'i' icon to its right.

Note: Your website will not play while in Lesson Builder. Select **Preview** to view full functionality.

If you already have a website URL, use the **Link** button from the toolbar. Decide how you would like the link to appear. **Display as Link** can be handy if you wish to add multiple links to a single card.

To embed a website's HTML code, use the **Link** button from the toolbar and select the **Custom HTML** tab.
