

Best Practices with ClassFlow: Using the Class Feed to Share Resources with Students

The Class Feed is ideal for sharing resources with students who have been or will be absent, creating a flipped classroom, and more. Under the **Classes** tab through either **My Feed** or the **Class Feed**, create a post to share with students.

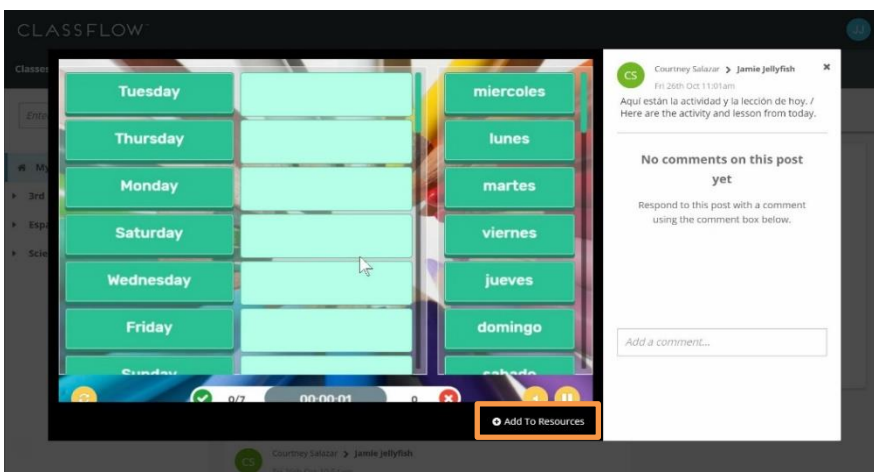

Select the **paperclip** icon to insert resources from your ClassFlow account, such as lessons and activities. Once items are selected, click **Attach**.

Select the **arrow** icon to insert resources from your device. This might include Word documents, PDFs, images, and more.

Note: To insert multimedia such as videos or websites, click the **paperclip**, then choose the **Web URL** tab.

Select a recipient. While only your classes will initially display, you may also send to individual students, or groups of students by simply typing the student or group name in the recipient field. Click **Post** when complete.

Students will see the post at the top of their home page when they next log into their ClassFlow accounts. Students can preview materials and add them to their Resources to retain permanently. For example, a student could play an activity from the feed, and then click **Add to Resources**.

Students may create posts only to their instructors and attach and share resources in the same ways.
