

How to Create Bookmarks in the Chromium Browser on Your ActivPanel Nickel

To bookmark your favorite websites for easy access in the preinstalled Chromium browser, begin by selecting the **Unified Menu**, then tap **Locker**. In the Locker, select the **Chromium** app.

Enter or search for the URL you wish to bookmark. Select the **star** icon to the right of the URL you entered. This bookmarks your page.

You will receive a brief confirmation at the bottom of the screen that the website has been bookmarked and the star will turn blue.

Tap the **three vertical dots** in the top right, then select **Bookmarks** to modify your existing bookmarks. You may edit bookmarks, move them into folders, and delete them.

To visit a bookmarked website, tap the website that appears. Then, tap the **three vertical dots** on the blue header to reveal options.
