

How to Connect Students Through Open Class in ClassFlow

Open Class is a quick, easy way to connect students to your current ClassFlow session and maximize student engagement.

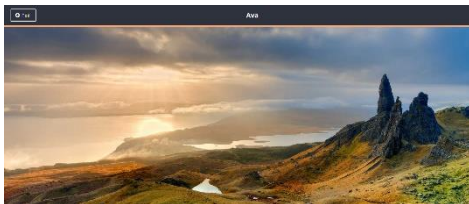

Select the **Open Class** button from the home screen. A connection window opens, displaying the URL participants should use. The last five digits of this URL are your Class Code and are unique to you. Your class code always stays the same, which comes in handy if you wish your students to bookmark the address.

When a student arrives at your Open Class URL, they simply enter their **name** and click the blue **Join Anyway** button.

Choose Your Name From the Class Roster

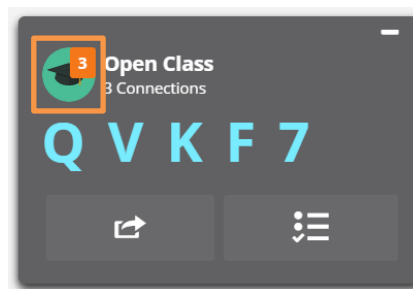

DON'T SEE YOUR NAME?

Enter your name... Join Anyway

If you have not yet sent content to students, either by using the **Send** button from your Teacher Panel or in the form of student cards, connected students will see scrolling landscape images. This is a holding screen meant to redirect their attention to you.

Meanwhile, you will see the names and number of connected students populating within your Connection Panel. When delivering a lesson, the number of connected students appears on your Teacher Panel. Click the **graduation cap** to open the Connection Panel.

ClassFlow automatically saves results from all polls and assessments delivered via Open Class. Locate the data in **My Feed** under the **Classes** tab.
