

## How to Deliver a ClassFlow Lesson from Marketplace

The ClassFlow Marketplace is full of engaging, ready-made content for you to use, saving you valuable time and energy. If you find a resource you wish to share with your students immediately, select **Deliver**. Choose between Open Class and any existing rostered classes you may have.

If delivering to Open Class, simply click the **Connect Your Students** segment of the teacher panel to display the URL students will use to connect to your session. If delivering to a rostered class, students will log into their accounts and connect to your session.

You and your students may interact with the lesson using the tools in Lesson Presenter. ClassFlow will automatically record any polling or assessment data as you move through the lesson. Data will be saved under the **Classes** tab.

Once you are finished, select the **menu** button and choose **Exit**. You will then have the option to save your resource as a lesson before returning to Marketplace.

Back at Marketplace, you can add the resource to Resources for easy retrieval.
