

How to Select Power On Default Source on Your ActivPanel Titanium

If you frequently use connected devices in tandem with your Elements Series ActivPanel, such as a Promethean Chromebox, ActivConnect OPS-G or OPS-M, or even your laptop, you may wish for your panel to automatically launch to that environment. In this case, changing your Power On Default Source will save you valuable time.

To begin, select the **Unified Menu**, then tap **Locker**. Within the Locker, tap the gear icon for **Settings**. Then select **More Settings**.

Next, select **Display**.

Within Display settings, select **Power On Default Source**.

This will display the locations of currently connected devices. Select whichever source you wish for your ActivPanel to default to when powering on. You may change this setting at any time.
